

# Quality Technician

---

As a result of significant recent growth and restructuring, Fluenta is seeking a Quality Technician to join our UK team and support our growing business.

## Role Requirements

The Quality Technician should fulfil the following requirements:

- Education: a degree in engineering, business or equivalent.
- Demonstrate experience in handling internal quality audits.
- Experience with root cause investigations to resolve quality issues.
- Experience: ISO 9001 essential.
- Experience in equipment production for operation in hazardous locations (ATEX) or similar is an advantage.
- Experience in the manufacturing of electronic products.
- Desired personal skills: self-motivated, a can-do attitude, and an eye for spotting opportunities to improve processes.
- Possess the ability to work effectively in a complex and diverse environment while adapting to change and maintaining focus.
- Demonstrate strong attention to detail in executing tasks and ensuring accuracy in all work products.
- Competence in MS office applications.
- Fluency in English speaking and writing is required.

## Range of Duties

This role includes the following duties:

- To be details orientated.
- Create standards, policies and procedures to meet required standards.
- Maintain and update the QMS documentation system.
- Communicate updates and changes in policies, processes/procedures and records/forms used in the company.
- Ensure the efficiency of the quality management system.
- Provide constant improvements and development.

- Ensure that all employees perform work according to HSE Manual and Safety Instructions.
- Lead, influence, and coordinate all teams across the company to improve processes.
- Create simple and practical quality management documents. Convert activities into clear flow charts and processes.

## Salary and Benefits

- £29K to £35K, dependent on experience.
- 25 days holiday, pension scheme, electric company car scheme.

## About us

Founded in 1985, Fluenta is a leader in the use of ultrasonic sensing technology for the measurement of flare gas. Monitoring flare gas is a critical aspect of managing safety and profitability within the oil and gas industry as well as providing the basis by which oil companies pay certain taxes and report environmental issues.

Fluenta has offices across the world, Norway, Poland, UK, UAE, Malaysia, and the USA.
